Wait, What? - AI-Generated Psychological Thriller Short Film

Instructor: Eng. John Youssef

Project Idea

A psychological thriller short film created entirely using AI tools. The story follows two business partners, Adam and Noah, who face a massive crisis after losing a critical deal. While Adam breaks down in anger and paranoia, Noah plays the calm, supportive friend. However, a final psychological twist reveals that the betrayal came from the closest person. The film focuses on emotional manipulation, trust, and hidden intentions.

Work Plan

Our project execution is structured into 7 comprehensive phases:

1. Project Briefing: Defining the cinematic concept, psychological thriller genre, and outlining core deliverables for a 4–9 minute AI film.
2. Story Development & Pre-Production: Building the narrative arc, writing the full script, and breaking it down into a detailed Scene Plan and Visual Direction manual.
3. Character & Visual Creation: Generating consistent character designs (Adam, Noah, Karim), environments, and establishing key frames for each shot.
4. Film Production: Converting base images into cinematic video sequences using AI tools, applying camera motion, and producing audio (dialogues, lip-sync, music).
5. Editing & Post-Production: Assembling sequences into a coherent narrative, maintaining visual/lighting consistency, and optimizing color grading and sound design.
6. Final Film Optimization: Reviewing pacing, scene durations, transitions, and fixing any continuity or AI-generated distortions.
7. Presentation and Feedback: Preparing the final presentation covering our creative process, AI pipeline, challenges, and receiving feedback on the final cut.

KPIs (Key Performance Indicators)

- Narrative Flow: Successfully translating the written script into a 4–9 minute engaging cinematic experience.
- Visual & Character Consistency: Maintaining 100% facial and environmental consistency across different AI generation tools.
- Technical Quality: Achieving smooth AI video transitions, accurate lip-sync, and high-quality audio mastering.
- Deadline Compliance: Delivering all 7 project phases and the final presentation on schedule.
